TENNE I - ANTENNE PER SISTEMI DI TELECOMUNICAZIONI

$$-\mathbf{H}_{t}^{a}(\mathbf{M})-\mathbf{H}_{t}^{b}(\mathbf{M})=\mathbf{H}_{t}^{i}(\mathbf{J}^{i})$$

Si risolve l'equazione con il Metodo dei Momenti

$$\mathbf{M} = \sum_{n} V_{n} \mathbf{M}_{n}$$

$$-\sum_{n} V_{n} \mathbf{H}_{t}^{a}(\mathbf{M}_{n}) - \sum_{n} V_{n} \mathbf{H}_{t}^{b}(\mathbf{M}_{n}) = \mathbf{H}_{t}^{i}$$

$$-\sum_{n}V_{n}\left\langle \mathbf{w}_{m},\mathbf{H}_{t}^{a}\left(\mathbf{M}_{n}\right)\right\rangle -\sum_{n}V_{n}\left\langle \mathbf{w}_{m},\mathbf{H}_{t}^{b}\left(\mathbf{M}_{n}\right)\right\rangle =\left\langle \mathbf{w}_{m},\mathbf{H}_{t}^{i}\right\rangle$$

## TEOREMA DI EQUIVALENZA NELLA FORMULAZIONE DI HARRINGTON-MAUTZ

$$-\sum_{n} V_{n} \left\langle \mathbf{w}_{m}, \mathbf{H}_{t}^{a} \left( \mathbf{M}_{n} \right) \right\rangle - \sum_{n} V_{n} \left\langle \mathbf{w}_{m}, \mathbf{H}_{t}^{b} \left( \mathbf{M}_{n} \right) \right\rangle = \left\langle \mathbf{w}_{m}, \mathbf{H}_{t}^{i} \right\rangle$$

$$[Y^a] = \langle -\mathbf{w}_m, \mathbf{H}_t^a(\mathbf{M}_n) \rangle \Big|_{\mathcal{N}_{t,t}}$$

$$[Y] = |Y^a| + |Y^b| = |Y^a + Y^b|$$

$$\begin{bmatrix} I^i \end{bmatrix} = \left[ \left\langle \mathbf{w}_m, \mathbf{H}_t^i \middle( \mathbf{J}^i \middle) \right\rangle \right]_{N \times 1}$$

Vettore delle correnti generalizzate (termini noti)

$$[V] = [V_n]_{N \times 1}$$

Vettore delle tensioni generalizzate (incognite)

Equazione matriciale

$$[Y][V] = [I^i]$$
